最简单的基于FFmpeg的AVfilter的例子-纯净版

有关FFmpeg的avfilter已经写过一个水印叠加的例子《 最简单的基于FFmpeg的AVfilter例子(水印叠加) 》,本文作为补充再记录一个纯净版 的avfilter的例子。此前libavfilter一直是结合着libavcodec等类库的接口函数使用的,因此我一直以为libavfilter库与libavcodec等类库是高度耦合的 (也就是如果想使用libavfilter的视音频特效功能的话必须使用libavcodec等类库的函数)。这两天空闲的时候研究了一下libavfilter的代码后发现实 际情况不是这样的:libavfilter可以独立于libavcodec等类库的接口函数作为一个"纯粹"的视音频特效类库进行使用。本文记录的"纯净版"的avfilter的 例子即实现了一个纯粹的视频特效添加的功能。该例子输入为一个YUV文件,输出也是一个YUV文件,通过avfilter的功能可以处理该YUV文件实现 去色调、模糊、水平翻转、裁剪、加方框、叠加文字等功能。

流程图

该程序的流程图如下所示。AVFilter的初始化比较复杂,而使用起来比较简单。初始化的时候需要调用avfilter_register_all()到avfilter_graph_config()一系列函数。而使用的时候只有两个函数:av_buffersrc_add_frame()用于向FilterGraph中加入一个AVFrame, mav_buffersink_get_frame()用于 从FilterGraph中取出一个AVFrame。

雷雪骅 (Lei Xiaohua) Communication University of China / Digital TV Technology Email: leixiaohua1020@126.com Website: http://blog.csdn.net/leixiaohua1020

流程中的关键函数如下所示:

avfilter_register_all():注册所有AVFilter。

avfilter_graph_alloc():为FilterGraph分配内存。

avfilter_graph_create_filter():创建并向FilterGraph中添加一个Filter。

avfilter_graph_parse_ptr():将一串通过字符串描述的Graph添加到FilterGraph中。

avfilter_graph_config():检查FilterGraph的配置。

av_buffersrc_add_frame():向FilterGraph中加入一个AVFrame。 av_buffersink_get_frame():从FilterGraph中取出一个AVFrame。

200.
201.
              av frame free(&frame out);
             avfilter_graph_free(&filter_graph);
202.
203.
204.
              return 0;
205.
```

结果

本程序输入为一个名称为"sintel_480x272_yuv420p.yuv"的YUV420P视频数据,输出为一个名称为"output.yuv" 的YUV420P视频数据。输入的视频数据的内容如下所示。

程序中提供了几种特效:

- lutyuv='u=128:v=128'
- boxblur
- hflip
- hue='h=60:s=-3'
- crop=2/3*in_w:2/3*in_h
- drawbox=x=100:y=100:w=100:h=100:color=pink@0.5
- drawtext=fontfile=arial.ttf:fontcolor=green:fontsize=30:text='Lei Xiaohua'

可以通过修改程序中的filter_descr字符串实现上述几种特效。下面展示几种特效的效果图。

lutyuv='u=128:v=128'

hflip

hue='h=60:s=-3'

crop=2/3*in_w:2/3*in_h

drawbox = x = 100: y = 100: w = 100: h = 100: color = pink@0.5

drawtext=fontfile=arial.ttf:fontcolor=green:fontsize=30:text='Lei Xiaohua'

CSDN下载地址: http://download.csdn.net/detail/leixiaohua1020/9424521

本程序使用包含下面两个项目:

simplest_ffmpeg_video_filter:可以将一张PNG图片作为水印叠加到视频上,结合使用了libavfilter,libavcodec等类库。simplest_ffmpeg_video_filter_pure:可以给YUV像素数据加特效,只用了libavfilter库。
