MediaInfo源代码分析 4: Inform()函数

2013年10月08日 21:40:09 阅读数:3997

MediaInfo源代码分析系列文章列表:

MediaInfo源代码分析 1:整体结构
MediaInfo源代码分析 2:API函数
MediaInfo源代码分析 3:Open()函数
MediaInfo源代码分析 4:Inform()函数
MediaInfo源代码分析 5:JPEG解析代码分析

我们来看一下MediaInfo中的Inform()函数的内部调用过程

首先Inform()函数封装了MediaInfo_Internal类中的Inform()函数

```
[cpp] 
③

1. //返回文件信息

2. String MediaInfo::Inform(size_t)

3. {

4. //封装了一层

5. return Internal->Inform();

6. }
```

查看一下MediaInfo_Internal类中的Inform()函数的源代码:

```
[cpp] 📳 📑
                // 获取信息
 2.
               Ztring MediaInfo_Internal::Inform()
  4.
 5.
                         if (Info && Info->Status[File_Analyze::IsUpdated])
 6.
                                 Info->Open_Buffer_Update();
                         CS.Leave();
 8.
 9.
                         if (MediaInfoLib::Config.Inform Get()== T("MPEG-7"))
10.
                                  return Export Mpeg7().Transform(*this);
11.
                          \textbf{if} \ (\texttt{MediaInfoLib}:: \texttt{Config}. \texttt{Inform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ | \ \texttt{MediaInfoLib}:: \texttt{Config}. \texttt{Inform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ | \ \texttt{MediaInfoLib}:: \texttt{Config}. \texttt{Inform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ | \ \texttt{MediaInfoLib}:: \texttt{Config}. \texttt{Inform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ | \ \texttt{MediaInfoLib}:: \texttt{Config}. \texttt{Inform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ \texttt{MediaInform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ \texttt{MediaInform\_Get}() == \_\texttt{T}("\texttt{PBCore}") \ | \ \texttt{MediaInform\_Get}() =
12.
                                   return Export_PBCore().Transform(*this);
13.
                          if (MediaInfoLib::Config.Inform_Get()==__T("reVTMD"))
14.
                                  return __T("reVTMD is disabled due to its non-free licensing."); //return Export_reVTMD().Transform(*this);
15.
                          //获取相应的信息
16.
                        if (!(
17.
                                   MediaInfoLib::Config.Inform_Get(__T("General")).empty()
18.
                            && MediaInfoLib::Config.Inform_Get(__T("Video")).empty()

```

函数比较复杂,从代码中我们可以看出,Inform()的实质还是使用Get()一个一个取出所有的属性值。

当指定输出为XML或者是HTML的时候,在输出的字符串上加上相应的标签(例如,输出为HTML的时候,字符串每一行上加上"",首尾加上"")

具体每一块代码的含义已经写在注释中了。
